ITC PBR INTRODUCTION:dm FEN- E ENEE

Section 5: Fire and Explosion Data -

Dike fire-control water for later disposal. Use agents suitable for type of surrounding fire.

Large petrochemical fire at Intercontinental Terminals Company in Deer Park, #Houston has finally been extinguished.

Ralph Chaiet <RChaiet@wittobriens.com>

Email- I can't do below. That is a permit action. Company should be able to authorize all products previously authorized for storage in TK12-41 and TK-42 before they were demolished and replace by exact same size tanks in exact location documented in this notification.* (I hope this makes sense).

Made railcar addition to email.

Technically you only get to store one chemical when you build a tank. The authorization for a change of service only comes when you make a change of service in accordance with the proper current pBR. I really over reaching with these five chemicals since you really can only handle two at most for the original service authorization.

Do you agree with the 7.71 lbs/hr truck loading at 6000 bbls/hr? LL=12.46*6000*42/1000*0.002* 0.5 / 550 oR =7.71 lbs/hr
